

Centralized Learning Initiative

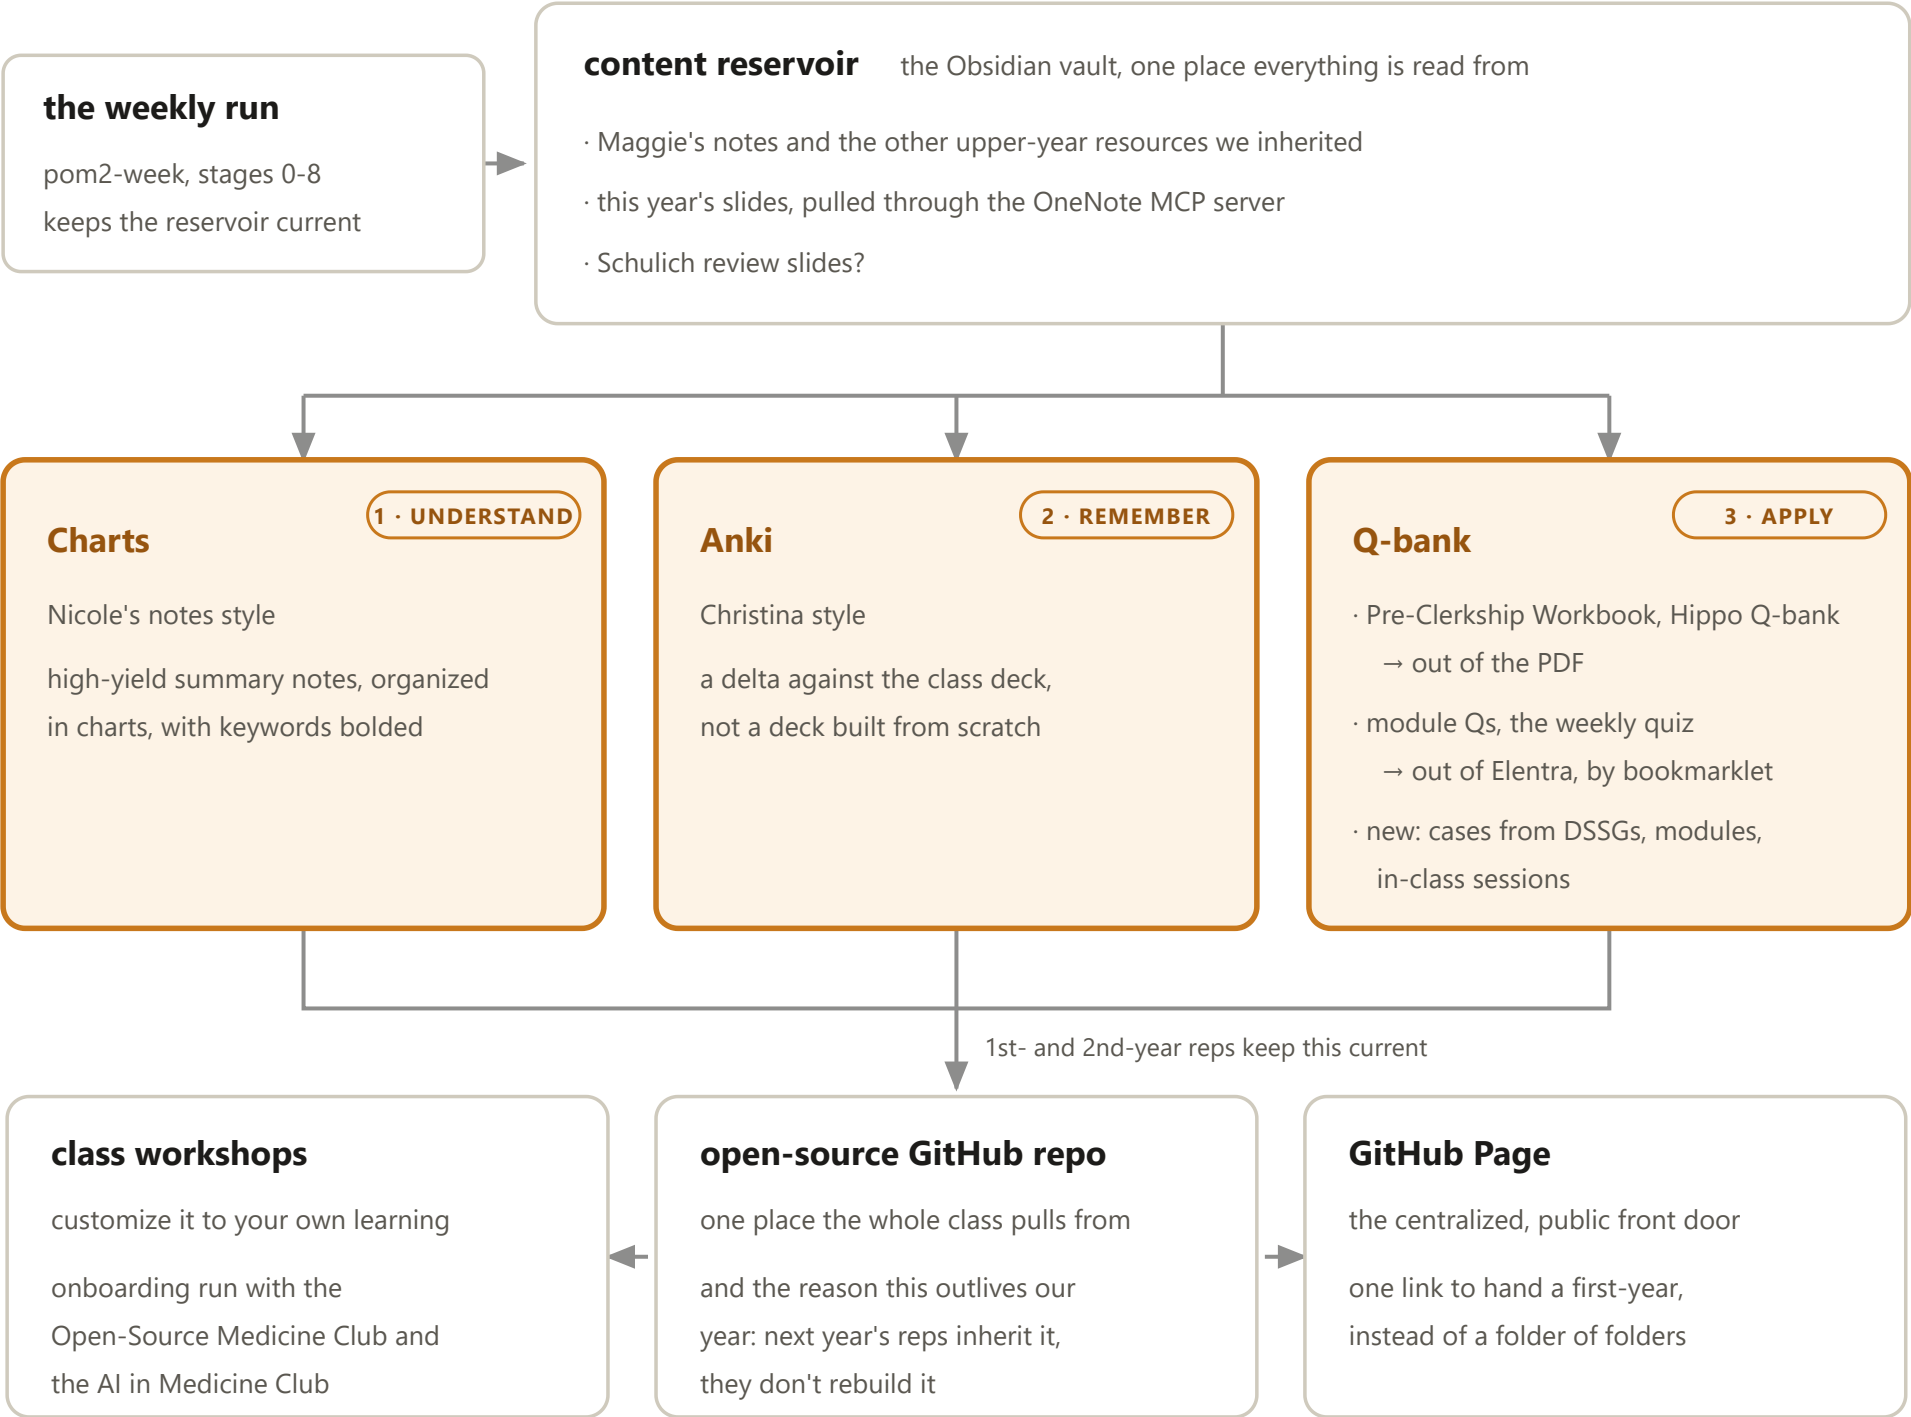

working name: *MedFriend?* or *Pre-clerk Pre-req?*

GOAL

- ↓ resource fatigue
- ↓ cognitive load, through organization
- dynamic, up to date, and sustainable beyond this year

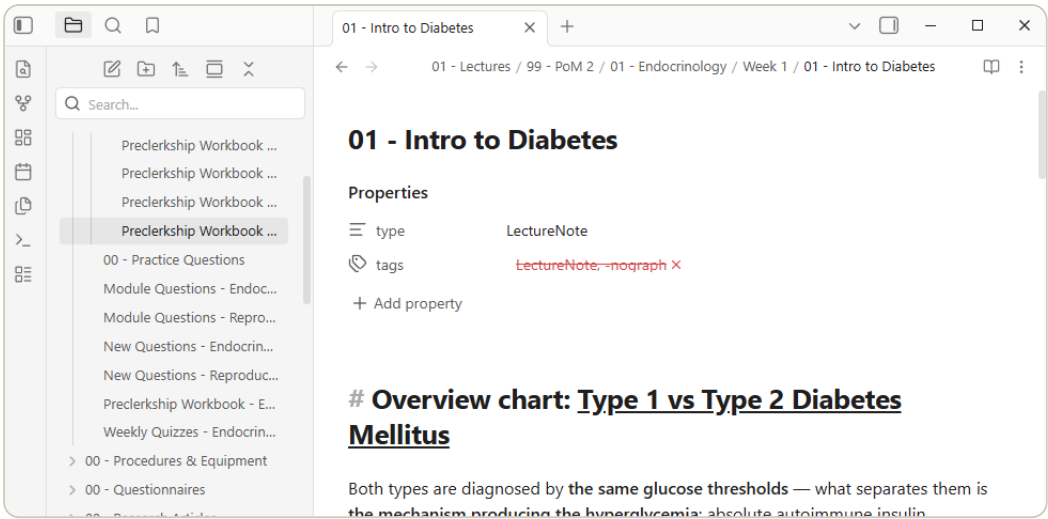

CREDIT

Everyone whose work made this possible, including the upper years whose resources the reservoir is built on.

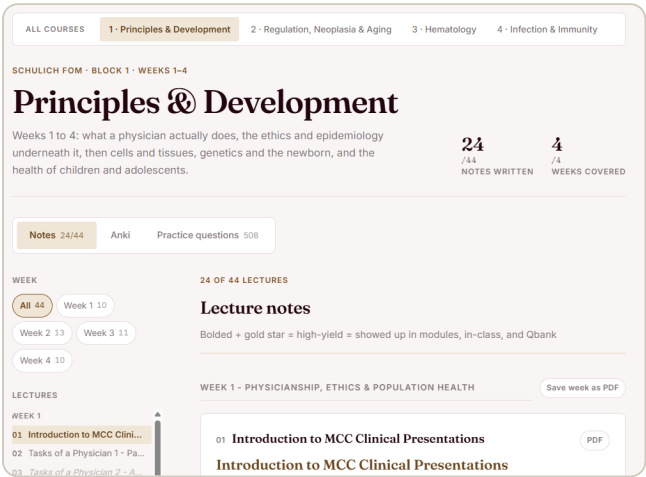

PIPELINE VISUALIZED

CONTENT RESERVOIR

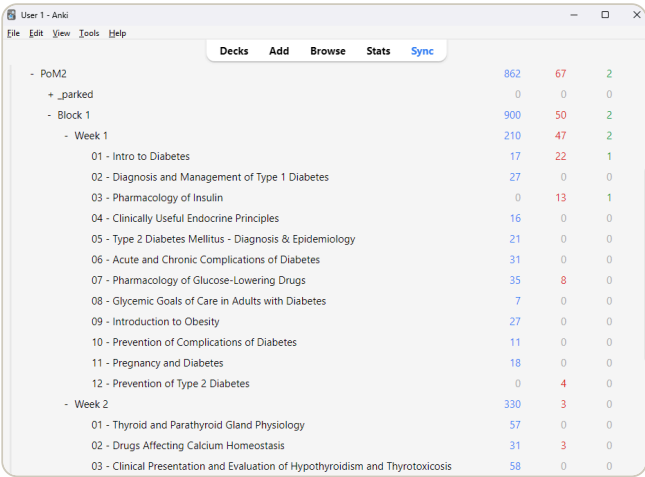

The vault: lectures, question sets and charts filed in one tree, which is the only place anything is read from.

1 · UNDERSTAND — CHARTS

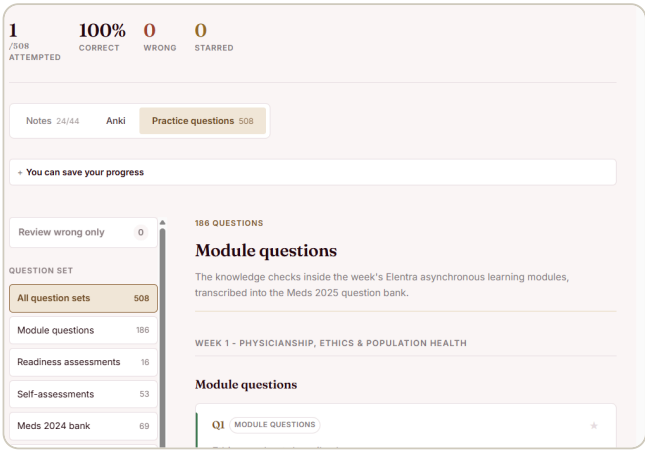

One note a lecture, in Nicole's style — and the lecture list shows what is written up and what is not.

2 · REMEMBER — ANKI

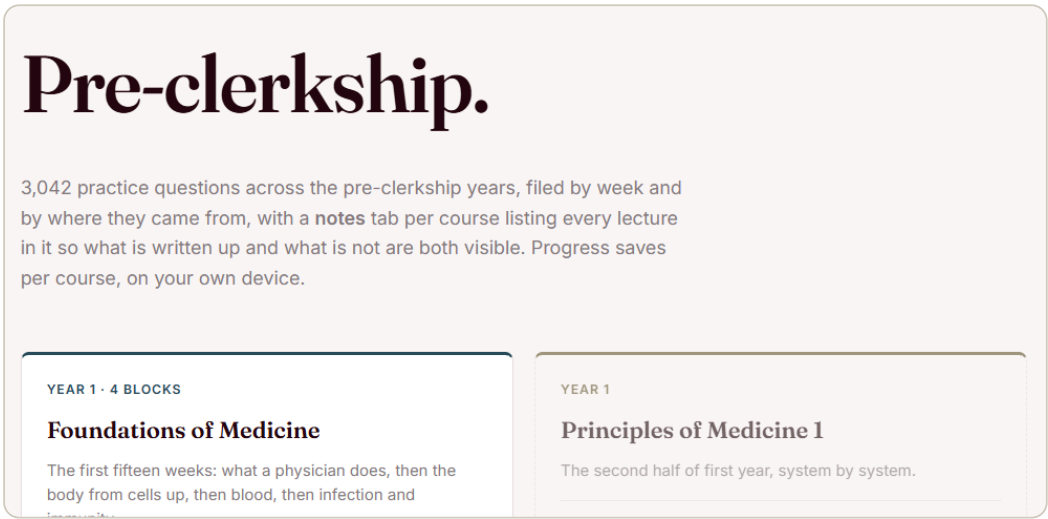

The class deck, split by block, week and lecture; the weekly run adds a delta, not a second deck.

3 · APPLY — Q-BANK

Every question set for the block in one place, filed by where it came from, with progress kept per course.

GITHUB PAGE

The public front door: one card a course, with the counts saying plainly how much is built.

FUTURE DEVELOPMENT IDEAS

- **Q-bank layout.** Continuous scroll, or one question at a time.
- **Q-bank feedback.** Tutor mode, answer on the spot; or test mode, a block of 10, 20, 40, reviewed after you submit.
- **NotebookLM on the vault** — mind maps and video overviews for the lectures that are diagrams, not prose.
- **Research & podcasts.**
